

CAPABILITIES STATEMENT

SPOKANE, WASHINGTON

Fully licensed, bonded, and insured to perform electrical contracting services throughout Washington State.

95%+

On-time project completion rate

Up to 80%

Reduction in electrical system downtime

100%

Federal project completion, zero safety incidents

COMPANY OVERVIEW

Grounded Electrical Services combines the responsiveness of a small business with experience supporting commercial, industrial, and federal government clients. The company has successfully completed electrical construction, maintenance, tenant improvements, low-voltage systems, controls, power distribution, and infrastructure projects for the Department of Homeland Security and private-sector clients. Direct owner involvement ensures quality control, rapid decision-making, and responsive customer service. With experience ranging from service work and troubleshooting to industrial equipment installations and facility upgrades, Grounded Electrical Services delivers safe, code-compliant solutions while minimizing operational disruptions and maintaining project schedules. The company focuses on building long-term relationships with both government and commercial clients.

CORE COMPETENCIES

- Facility Electrical Construction, Installation, and Repair:** Electrical construction, installation, maintenance, and repair for commercial, industrial, and government facilities, including new electrical services, branch circuits, equipment connections, low-voltage cabling and devices, and electrical rough-in.
- Power Distribution and Service Upgrades:** Electrical power distribution systems, service upgrades, panel replacements, switchgear, and equipment installation that expand capacity for current operations and future facility needs.
- Design-Build, Tenant Improvements, and Infrastructure:** Design-build electrical construction, tenant improvements, facility renovations, and infrastructure upgrades coordinated with mechanical trades and facility personnel.
- Preventive Maintenance and Emergency Response:** Preventive maintenance, troubleshooting, emergency electrical service response, and system reliability support that protect operational continuity.
- Lighting, Controls, and Energy Efficiency:** Lighting systems, controls, light-emitting diode (LED) retrofits, energy-efficient upgrades, and exterior site lighting.

DIFFERENTIATORS

- Owner-led, IBEW-trained delivery:** Every project is overseen directly by the owner, who completed a formal International Brotherhood of Electrical Workers (IBEW) apprenticeship, so clients work with an experienced principal rather than a rotating crew.
- Repeat-client track record:** Sustains repeat business and referrals across commercial, industrial, and federal work through responsive service and consistent on-time delivery.
- Surety headroom above task-order value:** Bonding capacity is roughly twice the largest single project completed, supporting confidence that the firm can be bonded for larger task orders.

PAST PERFORMANCE

Federal Facility Electrical Infrastructure Support and Improvement Program

Department of Homeland Security (DHS) | \$90,000

Installed new electrical services, branch circuits, power distribution systems, low-voltage cabling and devices, and equipment connections; performed electrical rough-in for future projects; and completed troubleshooting, repairs, and code-compliance upgrades. Performed across multiple task orders in occupied federal facilities, coordinating with government personnel under strict security and scheduling requirements while maintaining operational continuity. Delivered at a 100% completion rate with zero safety incidents.

RELEVANT COMMERCIAL EXPERIENCE

Franz Bakery Boiler Replacement and Electrical Infrastructure Upgrade Atlas Boiler (Franz Bakery facility) | \$10,000

As electrical subcontractor to Atlas Boiler, performed electrical demolition, power distribution, conduit installation, and control wiring for an industrial boiler replacement at the Franz Bakery facility, including removal of the existing boiler's electrical systems, new conduit and power circuits for the replacement equipment, and control wiring for valves, sensors, and emergency-stop stations. Coordinated with mechanical contractors and facility personnel to sequence the work and minimize disruption, in compliance with project specifications, safety requirements, and applicable electrical codes. Installed on schedule with zero safety incidents and no rework, allowing other trades to begin startup without delays.

AGENCIES OF INTEREST

Department of Homeland Security (DHS), General Services Administration (GSA), Department of Veterans Affairs (VA), U.S. Army Corps of Engineers (USACE), Naval Facilities Engineering Systems Command (NAVFAC), Department of Defense (DoD) installations, Department of Energy (DOE) facilities, and other federal agencies.
